

Cough? Bronchitis?

Bronchipret®

-  soothes the cough
-  releases the blocked mucus
-  combats the inflammation in the bronchial tubes

Extra strong and highly concentrated*

*extra strong in relation to the total amount of plant raw material absorbed [in g] in drops compared to syrup | highly concentrated in relation to the concentration of the plant raw material [mg/ml] in drops compared to syrup.

Cough? Bronchitis?

The wet and cold season also marks the beginning of the cough and bronchitis season. The warm heating air can dry out the mucous membranes. This makes our airways more susceptible to pathogens. These enter the mouth and nose, settle in the bronchial tubes and cause inflammation of the mucous membranes of the airways.

Together with the clogged mucus, this inflammation stimulates the so-called cough receptors in the bronchial tubes. Once someone has caught bronchitis, it can take a long time until they get rid of the annoying cough again. Acute bronchitis can be roughly divided up into three phases:

Cross section of a bronchial mucous membrane

Bronchipret® – A strong team against coughs and bronchitis

Thyme and ivy support and complement each other in their effect. This makes the medicinal plant combination highly effective in treating coughs and bronchitis.

How Bronchipret® helps you

 soothes the cough

„The irritation of the cough decreases.“

 releases the blocked mucus

„The tough mucus can be coughed up more easily, so that you can breathe more freely again.“

 combats the inflammation of the bronchial tubes

„The feeling of soreness and the cough are alleviated.“

Tips for coughs

Allow yourself **enough rest** to make a full recovery again.

Since the body loses a lot of fluid at elevated temperatures, it is important to **make sure you drink enough**. Warm herbal teas or „hot lemon“ and water are particularly suitable.

Warm chest compresses (e.g. with boiled potatoes) are particularly suitable for stubborn coughs when your temperature is slightly elevated. Boil 4-5 potatoes, allow them to cool down slightly, mash them and wrap them in a cotton cloth. Place the package on the chest and hold it in place with a large towel.

Inhalation: Hot vapours (with or without essential oils) or an inhaler with nebulising function can improve the symptoms. (Caution! Do not use essential oil for infants. Children should only inhale under supervision!)

No smoking! Smoking disrupts the self-cleaning mechanism of the mucous membranes of the airways. Even if it is difficult, it is a good idea to refrain from smoking during an attack of bronchitis.

Rub the chest with **cold balm**. (Caution! Do not use for infants or during pregnancy.)

Bronchipret® – The right dosage form for every patient

Cough? Bronchitis

For everyone aged 1 and above

Specially for adults

Tickle in the throat?
Hoarseness?

Bronchipret® Syrup TE

Effective –
and tastes good

from 12 years
of age and adults: 3 x 5.4 ml
6–11 years: 3 x 4.3 ml
1–5 years: 3 x 3.2 ml

Bronchipret® Drops

Highly concentrated*
with a fast-acting effect

from 12 years
of age and adults: 3 x 2.6 ml
6–11 years: 3 x 1.3 ml
